

TET1-mediated DNA hypomethylation regulates the expression of MUC4 in lung cancer – Yokoyama et al

Supplementary Figure 1: ROC analysis for determination of threshold value. (A) Comparison of the expression level of *MUC4* mRNA between the group found to be *MUC4* negative and the group found to be *MUC4* positive by IHC analysis. The IHC positive group showed a higher expression level of *MUC4* than the IHC negative group. (B) Calculation of the threshold value of *MUC4* mRNA between *MUC4* negative and *MUC4* positive groups (as determined by IHC analysis). The threshold value (2.127) of mRNA expression between the *MUC4* negative and *MUC4* positive groups was calculated by ROC analysis. (C) Comparison of the hypomethylation index of the *MUC4* promoter between *MUC4* negative and *MUC4* positive groups (mRNA expression). The *MUC4* mRNA-positive group showed a higher hypomethylation index than the *MUC4* mRNA negative group. (D) Calculation of the threshold value of the *MUC4* hypomethylation index between *MUC4* negative and *MUC4* positive groups (mRNA expression). The threshold value (2.489) to differentiate between hypo-methylation and hyper-methylation of the *MUC4* promoter was calculated by ROC analysis.

Supplementary Figure 2: Multiple regression analysis of the expression level of DNA demethylation-related enzymes against the hypomethylation status of the *MUC4* promoter. The multiple regression predictive value was obtained with the following formula: $F_m(\text{Enzyme expression index for } MUC4) = 1.8 + 0.23(TET1) + 0.17(TET2)$. R²: R squared, ***: $p < 0.001$, **: $p < 0.01$, *: $p < 0.05$, ○: non-neoplastic region, ●: neoplastic region.

Table S1. Clinicopathological features

Age	Median	±SD	
	69	±9.0	
Sex		n	(%)
	F	18	(54.5%)
	M	15	(45.4%)
Size	Median	±SD (mm)

ks.test is Kolmogorov–Smirnov test. Performs an F test to compare the variances of two samples from normal populations. p value is calculated by equal variance t test, Unequal variance t test (*) or Mann-Whitney U test (**), p value p is calculated by paired t test. n: negative, p: positive, N: non-neoplastic region, T: neoplastic region, E: Early stage (T score=1a), L: Late stage (T score>1a)
