

Systems biology network reveals the correlation between COX-2 expression and Ch 7q copy number alterations in Ch 11q-deleted pediatric neuroblastoma tumors

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: Experimental design. Ninety patients treated for neuroblastic tumors in the Pequeno Principe Pediatric Hospital were included in the study. Clinical and demographic data were obtained from medical records, uncovering 76 cases of neuroblastoma. FFPE tumor samples collected in diagnosis and post-chemotherapy were stained for COX-2 by IHC. The genome profile of cases with paired pre- and post-CT COX-2-positive samples were determined by a-CGH and analyzed by statistics multivariate tests. Three cases presented chromosomal copy number alterations correlated with COX-2 expression and segmental chromosomal alterations were deeply analyzed by systems biology approaches. Notes: FFPE, formalin-fixed paraffin-embedded; IHC, immunohistochemistry; CNA, copy number alterations.

Supplementary Table 1: Correlation analysis between clinical data, chromosomal alterations, and immunoexpression of COX-2 and CAV-1. See Supplementary Table 1
